

CLUTCH MULTI-PURPOSE ROPE ACCESS SYSTEM

<https://www.securhit.com/en/belay-and-descenders/1010-dispositif-de-deplacement-sur-cordes-polyvalent-clutch.html>

Multi-purpose rope access CLUTCH

Description

The CLUTCH device is designed for rope access and rescue professionals.

It stands out for its great versatility: effective as a descender, it can also be used for rope ascents, avoiding the need to change equipment.

The CLUTCH features a ribbed sheave and a stainless steel ratchet for secure rope hold with audible anti-reverse.

Its innovative double-locking flange, independent of the attachment point, prevents accidental opening. The force-limiting sheave protects against overloading, and an anti-panic function automatically locks the rope in place if excessive force is exerted on the handle.

Suitable for rope diameters from 10.5 to 11mm.

Complies with standards: NFPA 1983 (G), ANSI Z359.4, EN 12841/C, 341/2A and 15151/8 (up to 200 m/240 kg).

Caractéristiques

- Dimensions : 112 x 204 mm
- Weight : 0.84 kg
