Mobile fall arrester rope with locking function

Description

The ASAP LOCK mobile fall arrester is designed to facilitate the user's handling when climbing on a rope. In normal use, the device moves freely on the rope, without any manual intervention, in order to accompany the user in his movements. In the event of a shock or sudden acceleration, the fall arrester locks onto the rope and immobilizes the user. The integrated locking function allows the user to immobilize the device to reduce the height of fall. The connecting arm makes the system impervious to the passage of splits. It offers permanent fall protection, works on vertical or oblique ropes and locks onto the rope even if the device is grabbed during the fall.

The blocking function integrated into the fall arrester also prevents the rope from being pulled upwards in strong winds.

It is simple to use and effective because it can be easily installed and uninstalled at any point on the rope.

Caractéristiques

- Weight : 425 g
- Materials : Aluminium, acier inoxydable, polyamide
