

CERVICO-THORACIC BRACE

<https://www.securhit.com/en/immobilization/1105-attelle-cervico-thoracique.html>

Cervico-thoracic brace

Description

The cervico thoracic splint is specially designed for extraction and immobilisation of the cervical and thoracic spine. This system is suitable for victims with suspected trauma to the vertebrae, hips or pelvis.

Its various support straps adjust precisely to the victim's morphology for optimum immobilisation.

Technical specifications:

- Back and side extraction handles.
- Coloured belly straps and front strap.
- Chin strap and neck cushion.
- Radio-transparent device enabling radiological examinations to be carried out without removing the splint.

Brace supplied with carry bag.

Caractéristiques

- Dimensions : 860 x 820 mm
- Weight : 3 kg
