CDK Vacuum Mattress with Carry Bag and QMX 109 Pump - Secure Trauma Immobilization System

Description

The CDK vacuum mattress with QMX 109 pump is a patient immobilization and transport device designed for emergency medical services, rescue operations, and prehospital trauma care. It ensures complete, stable, and secure immobilization of the injured patient, reducing movement and minimizing the risk of further injury during transport. Robust, reliable, and suitable for demanding environments, this vacuum mattress is intended for professional rescue teams and emergency medical responders.

Optimal trauma patient immobilization

The CDK vacuum mattress is designed to provide precise anatomical support thanks to its ergonomic tapered shape, ensuring optimal adaptation to the patient's body.

It features a reinforced perimeter rope system that serves a dual purpose: handling grips for transport and attachment points for securing patient restraint straps. The lower section is equipped with soft carrying handles reinforced with Santoprene®, improving handling and maneuverability during rescue operations, while the upper section allows secure fastening of restraint straps.

Professional-grade durable and safe vacuum mattress

The CDK mattress is equipped with an on/off valve made of chrome-plated brass with an integrated hose connector, ensuring excellent resistance to temperature variations and reliable performance in all operational conditions.

Its structure is made from technical materials (PVC, polypropylene, nylon), providing high durability, long service life, and strong resistance to field constraints. The fabric is non-absorbent and self-extinguishing, suitable for high-risk environments.

The mattress is also radio-transparent, allowing X-ray imaging without removing the patient.

QMX 109 vacuum pump included

The kit includes the QMX 109 vacuum pump, made of ABS and PE, designed to quickly create the vacuum required for effective patient immobilization. It features a dual-valve system for both inflation and vacuum creation, ensuring efficient and easy operation.

Key benefits of the CDK vacuum mattress

- Complete and secure immobilization of trauma patients
- Reduced patient movement during transport
- Ergonomic tapered design for improved support
- Reinforced carrying system with 9 handles
- Multi-functional perimeter rope system
- Durable, non-absorbent and self-extinguishing materials
- Chrome-plated brass valve resistant to temperature variations
- Radiolucent (X-ray compatible) design
- QMX 109 vacuum pump included with dual-valve system

Technical specifications

CDK Mattress:

- Length: 215 cm
- Width: 90 cm
- Weight: 4.1 kg (excluding pump)
- Load capacity: 150 kg
- Handles: 9
- Materials: PP, PVC, nylon, brass, polystyrene
- Colors: orange / grey

QMX 109 Pump:

- Materials: ABS, PE
- Dimensions: 21.5 × 10 × 44.5 cm
- Weight: 0.6 kg
- Hose length: 100 cm

The CDK vacuum mattress is a complete and reliable solution for safe immobilization of trauma patients during emergency response and medical transport operations.

Caractéristiques

- Dimensions : 2150 (L) x 900 (l) mm
- Weight : 4.10 kg
