COBRA flexible water-carrying vest/bag

Description

The COBRA water-carrying bag is specially designed for extinguishing small fires.

Comfortable and practical, it is made from robust PES fabric with a yellow PVC coating for improved visibility.

The double-action hand pump, with its neat surface finish, ensures a particularly fluid flow. It is fitted with a metal nozzle for flow adjustment, as well as a foam inducer.

Its back cushion provides optimum comfort and good thermal protection.

The ergonomic harness system ensures a comfortable fit, while offering multiple adjustment options to suit the user's back morphology. It comprises wide shoulder, waist and sternum straps, all fully adjustable.

The large-diameter cap makes it easy to fill the reservoir.
