KAMI 2 fall arrest harness from KRATOS SAFETY

Description

The KAMI 2 harness is a versatile fall arrest harness designed to ensure the safety of workers at height. Offering two strategic attachment points, it guarantees optimum protection while providing comfort and ergonomics for the user.

Attachment points :

- 1 dorsal attachment point: for connection to a conventional fall arrest system (rear fall).
- 1 sternal attachment point: made up of 2 sturdy textile loops, ideal for connecting to the front, particularly for interventions requiring a descent or vertical support.

Technical features :

- Adjustable thighs: adapt easily to all body shapes for a precise, secure fit.
- Shoulder and thigh straps differentiated by 2 distinct colours: makes putting on the harness quick and intuitive.
- Optimally positioned buttock strap: significantly improves suspension comfort and reduces pressure points during long periods of use.
- Resistant anchorage points designed to meet the requirements of industrial environments and work at height.
- Can be used by users weighing up to 140 kg, guaranteeing robustness and reliability for a wide range of professionals.

Complies with EN 361:2002 standards

Caractéristiques

- Weight : 0.79 kg
- Size : Unique
- Matières des sangles : Polyester
- Matières des boucles : Acier
