Machine for automatic disinfection and drying of suit interiors

Description

This cleaning system for suits is extremely easy to use, thanks to a fully automatic process. It ensures effective washing and disinfection, while guaranteeing economical consumption of water and products. Water is continuously pumped out of the back bag and suit head, without manual intervention. For even more thorough maintenance, external cleaning can be carried out using an optional spray lance.

Technical specifications:

- Wash cycle: 4 hours for 2 suits
- Adjustable for different models and sizes of combinations, with height compensation tubes (10, 20 and 30 cm)
- Rounded tubes to preserve material integrity
- Flexible installation: wall-mounted or mobile version
