

THALES SECURITY ARMBAND

<https://www.securhit.com/en/harnais-et-baudriers/125-brassiere-de-securisation-thales.html> Safety chest collar and comfortable evacuation triangle with shoulder straps

Description

The THALES safety chest collar and evacuation triangle is designed for rescue operations, cable lift evacuations, and helicopter evacuations. The chest collar configuration allows the evacuee to be secured in an emergency and then evacuated with the triangle. Passing from the chest collar configuration to the triangle configuration is quick with the use of three hook and loop straps. The ergonomic shape of the seat and the presence of shoulder straps makes suspension more comfortable than with a classic evacuation triangle. Color-coding differentiates the back and seat, as well as the different straps and closure system, making it easier to put on the evacuee. The high-strength TPU tarp material allows regular to intensive use.

Certification(s): CE EN 1497, EN 1498 types A et B, UKCA, EASA CM-CS-005

Caractéristiques

- Weight : 1.3 kg
- Materials : TPU (sans PVC), polyester, acier, aluminium
- Certification(s) : CE EN 1497, EN 1498 types A et B, UKCA, EASA CM-CS
