Northern Diver Inflatable Rescue Sled - Rescue Sled

Description

The Northern Diver Inflatable Rescue Sled is a lightweight, durable, and easy-to-transport rescue board, ideal for rapid water rescue operations. Designed for a conscious casualty able to hold onto the board, it ensures efficient rescue in both calm and rough water conditions.

Fast and maneuverable rescue

Towed behind a personal watercraft (PWC), the rescue board allows teams to reach the casualty quickly, which is critical in swift or rough water rescue scenarios. In calmer conditions, it can also be swum out directly to the casualty and used to safely transport both rescuer and casualty.

Technical Specifications

- Capacity: 2 persons maximum, max load 200 kg (441 lbs)
- Dimensions: 185 cm x 105 cm (72.8" x 41.3")
- Floor type: Drop-Stitch Welded Fabric (DWF) for rigidity and durability
- Floor thickness: 15 cm (5.9") for enhanced buoyancy
- Weight: 11 kg (24 lbs) for lightweight handling and quick deployment
- Chambers: 1 for easy inflation and stability
- Handles: 12 reinforced handles for secure grip
- D-Rings: 2 medium + 5 large stainless steel (SS316) D-rings for safe attachments

Included with the inflatable rescue sled

- 1 inflation valve fitting
- 1 HP2 hand pump
- 1 storage bag
- 1 repair kit with tools

The Northern Diver Inflatable Rescue Sled combines lightweight design, durability, and ease of use, allowing rescue teams to respond quickly, whether towed by a PWC or swum out to the casualty. Its reinforced handles and D-rings provide safety and maneuverability, even in challenging conditions.
