Trapper Carrying Frame - Lightweight and Ergonomic Hose Transport Solution

Description

The Trapper Carrying Frame is an innovative solution designed for the efficient transport and rapid deployment of hoses and operational equipment. Thanks to its frameless design, it is one of the lightest carrying frames available on the market while providing outstanding carrying comfort.
Its ergonomic construction ensures optimal load distribution, making transportation easier across difficult terrain and during long approach marches. The pre-connected hose layout enables fast deployment and immediate operational readiness in the field. Versatile and adaptable, the Trapper Carrying Frame accommodates various hose storage configurations, including hose bundles and rolled coils, allowing users to choose the setup best suited to their operational requirements.

Key Benefits
- Ultra-lightweight frameless design
- Optimized load distribution for enhanced carrying comfort
- Rapid hose deployment with pre-connected hose bundles
- Ideal for difficult terrain and extended operations
- Compatible with multiple hose storage configurations
- Durable and ergonomic carrying system

Technical Specifications
- 1 top carrying handle
- 2 side carrying handles
- 1 helicopter hoisting loop rated to 200 kg
- Shoulder straps with quick-release automatic buckles
- 2 side pockets
- 1 front pocket
- Adjustable waist belt
- 4 side compression straps for secure hose retention

- Dedicated compartment for a hose divider
- Improved weight distribution through hose storage on the shoulder straps
- Integrated hose packing diagrams for quick and efficient loading

The Trapper Carrying Frame provides a lightweight, reliable, and efficient solution for transporting and deploying hoses in demanding operational environments.
