PAX RTS / Winter Transport Mattress - Insulated Patient Transport System

Description

The PAX RTS / Winter Transport Mattress is designed for the safe and comfortable transport of patients, particularly during emergency operations in cold weather conditions. Its adaptable design allows the system to be adjusted to the patient's size and body shape, helping to provide optimal support and comfort during transport.

The head opening can be easily adjusted to accommodate different patient sizes. This flexible design improves patient comfort and allows the transport mattress to be adapted quickly to various emergency and rescue situations.

Equipped with carrying handles compliant with EN 1865, the PAX RTS / Winter enables safe patient transport, including on uneven or unstable terrain. The Winter version features enhanced thermal insulation to help keep the patient comfortably warm, even in lower temperatures.

The PAX RTS / Winter is therefore particularly suitable for emergency medical services, ambulance services, fire and rescue teams, and other professional rescue organisations operating in demanding weather conditions.

Technical Specifications

- Product type: Insulated patient transport mattress
- Model: PAX RTS / Winter
- Intended use: Patient transport and thermal protection
- Version: Winter, with enhanced insulation
- Adjustable system: Adaptable to the patient's size and body shape
- Head opening: Adjustable for improved patient comfort
- Carrying handles: Compliant with EN 1865

- Suitable for uneven terrain: Yes
- Thermal protection: Enhanced insulation for cold-weather operations
- Length / depth: 206 cm
- Width: 48 cm
- Height: 36 cm
- Compliance: Medical device compliant with Regulation (EU) 2017/745 (MDR)

Caractéristiques

- Dimensions : 206 x 48 x 36 cm
- Weight : 3.20 kg
