FIRESHARK Firefighter Gloves EN 659 | Fire Protection

Description

The FIRESHARK firefighter gloves are specially designed to meet the demanding requirements of firefighting and rescue operations. Compliant with the EN 659 standard, they provide enhanced protection against thermal, mechanical and cut hazards, while maintaining a high level of comfort and dexterity. The gloves feature a waterproof and breathable membrane providing protection against the chemicals specified by EN 659 while helping to evacuate moisture. The back of the hand is made from flame-resistant CarbonX, providing reliable protection against high temperatures and thermal stresses. The palm is made from flame-resistant, ultra-soft Nappa leather, offering excellent grip and enhanced comfort during handling operations.

The glass fibre and para-aramid lining provides increased cut resistance. Pre-curved fingers, knuckle protection and an adjustable wrist strap ensure an ergonomic and secure fit during demanding interventions.

Technical specifications

- Standard: EN 659
- Back of hand: Flame-resistant CarbonX
- Palm: Flame-resistant Nappa leather
- Lining: Glass fibre / para-aramid blend
- Membrane: Waterproof and breathable
- Knuckle protection
- Reflective strip on the back of the hand
- Pre-curved fingers
- Adjustable wrist strap
- Carabiner for attachment

- Washable up to 60°C
- Available sizes: 6 to 13

EN 659 performance levels

- Abrasion resistance: 3
- Cut resistance: 4
- TDM cut resistance: E
- Tear resistance: 4
- Puncture resistance: 4
- Burning behaviour: 4
- Dexterity: 3
