

ELEMENTARY VIRTUAL REALITY TRAINING KIT

<https://www.securhit.com/en/virtual-reality/1306-kit-de-realite-virtuelle-pour-formation-elementary.html>

Immersive solution for effective training in fire safety, evacuation procedures, and first aid.

Description

The Elementary virtual reality training kit by Flashgroup is an immersive solution designed for professional fire safety training, emergency evacuation and risk prevention. Through interactive simulations inspired by real-life situations, it enables learners to develop their skills and improve their ability to respond effectively to emergencies.

What's Included in the Elementary Kit?

The kit includes:

- A virtual reality headset to access immersive training simulations.
- A fire extinguisher replica to practise firefighting techniques in virtual scenarios.
- An evacuation training module to learn how to respond effectively and follow the appropriate emergency procedures.
- A transport case to store, protect and easily transport the equipment.

13 Immersive Training Environments

Elementary offers 13 distinct training environments, providing a variety of scenarios to meet different learning objectives. The simulations cover key skills such as identifying different types of fires, using fire extinguishers, following evacuation procedures and managing emergency situations. These virtual environments allow learners to repeat exercises, practise decision-making and improve their responses in a controlled setting, without being exposed to the physical risks of real-life emergency situations.

A Performance Tracking Dashboard

The solution includes a performance tracking dashboard that enables trainers to review results after each session, access scoring information and analyse learner progress using detailed performance indicators. This tracking system helps assess learning outcomes and allows trainers to adapt exercises to

participants' individual needs.

A Portable and Versatile Training Solution

The Elementary kit is designed for businesses, training organisations and health and safety teams looking to modernise their safety training programmes. Thanks to its transport case, immersive environments and performance analysis dashboard, it makes it easier to deliver interactive training sessions across multiple locations. Elementary combines virtual reality, practical training equipment and performance analysis to provide an innovative approach to fire safety and emergency evacuation training.

Optional: CPR Training Module with Manikin Torso

To complement the training programme, an optional cardiopulmonary resuscitation (CPR) module with a manikin torso is available. This add-on introduces an additional practical component to first aid training and helps expand the scope of emergency response exercises.

Caractéristiques

- Dimensions de la valise : 51,5 × 40 × 25,5 cm (L × l × H)
- Poids total du kit : environ 9.5 kg, équipement inclus
