

PETZL ZIGZAG MECHANICAL PRUSIK 2019

<https://www.securhit.com/en/pulleys-and-ascenders/137-prusik-mecanique-petzl-zigzag-2019.html>

Mechanical Prusik for pruning

Description

The ZIGZAG mechanical Prusik allows you to move efficiently in the tree, while keeping the gestures of the classic Prusik pulley system. The block chain provides precision and fluidity in the movement. The pulley is mounted on a sealed ball bearing, which makes it easy to take up slack. Use on both double and single ropes provides excellent versatility.

Intuitive handling with the same gestures as the classic Prusik pulley system for immediate grip and automatic locking of the device to the rope, when the locking chain is deployed.

For efficient movement in the tree with a smooth and precise slack grip, thanks to the release lever offering a very high degree of precision during movement. Adjusting the pressure on this lever allows you to modulate the speed of movement, ease of slack removal, thanks to the sealed ball bearing mounted pulley and curved spreader flanges and a fixed lower connection hole to ensure the unit is aligned with the worker's axis and optimises grip.

Steel construction for increased durability and curved, spaced flanges for greater wear resistance.

Compatible with ropes from 11.5 to 13 mm in diameter and semi-static (EN 1891 type A).

The ZIGZAG allows you to work in accordance with ANSI Z133.

CE and UKCA certifications.

Caractéristiques

- Weight : 365 g
- Materials : Aluminium, acier, polyamide

Securhit Group - 360 rue de la Curiaz - 73290 La Motte-Servolex - France
