

NIVR 300 OFFSET / RETURN GALLOWS

<https://www.securhit.com/en/treuils-tripodes-et-antichutes/175-potence-de-deport-renvoi-nivr-300.html>

Multifunctional gallows for all types of rescues

Description

The Niv'r multifunctional gallows are unique and patented. They have been specifically designed for all suspended operations in industrial environments, for acrobatic work or for all operations in dangerous environments.

It has four configurations: offset, tripod, zip line and bipod. The assembly is done in a few minutes, its design makes it extremely resistant and gives it an excellent stability.

The gallows in zip line allows for the safe installation and height adjustment of a zip line or a device such as the MRP (Mobile Return Pulley on zip line) for the evacuation of a victim or equipment.

The tripod gallows can be used for the safe excavation of a victim or material. The vertical working space of the operators is important due to the dimensions of the gallows. The extension of the rear telescopic arm facilitates the positioning of the rescuer or the material.

The offset gallows allows for the evacuation or return of a victim or equipment in complete safety. The offset of the head of the gallows can reach more than one meter in relation to the line of speed (105 to 110° in relation to the vertical).

Standard NF 795 B

Caractéristiques

- Weight : De 13 à 23 kg (selon la configuration)
- Materials : Inox / aluminium
- Stem size : 2.20 m
