Electric battery LokHead winch

Description

The battery powered LokHead winch is a lightweight, versatile, portable system for performing winching operations as well as mechanical ascents for work at height. During ascents, the user is suspended below the system, which they can fully control from their position.
This battery-powered electric winch can operate both indoors and outdoors in environments with motor emission restrictions. The winch is equipped with a 50.4V lithium-ion battery with a BMS management system for extended battery life. The battery has an IP 54 protection rating and under optimal conditions can climb up to 550 m with a 125 kg load.
The non-aggressive winch allows several turns of the rope, so that wet or frozen ropes can be used for both ascents and descents.
The control handle incorporates a "dead man's switch" and the trigger regulates the climbing speed up to 15 meters/min.
The braking system is safe, non-aggressive and protected, and the axles and gearing are made of stainless steel and do not require any maintenance.
The Power compact rope winch is CE certified and complies with the Machine Directive.

Caractéristiques

- Weight : 18 kg
- Direct pull lifting force : 300 kg
- Lifting force by reeving : 1500 kg
