Flexible water rescue traiing manikins "conscious casualty"

Description

Solid manikins, with a realistic size, a weight and a prehension equivalent to a lifeless body.
Differents models exist to match with all training situations. They are made of a ballasted flexible internal core, a external layer in reinforced canvas and a overalls protection.
The flexible internal core is weighted to human proportion thanks to individuals bags of aggregates of 5-10 mm. The manufacturing method avoid a bad distribution of the aggregates and allow to the manikin to keep its shapre while using it. A layer of flame retardant foam binds the interior elements. A layer of flame retardant foam binds the interior elements. A envelope made of nylon complete the internal core.
The external recover is made of a thick canvad, resistant and seal of 425 gr/m². The seams are lined and the important restriction areas are reinforced with high density polypropylene for a better abrasion resistance.
Those training manikins in water environment perfectly simulate an unconscious body flotating to the surface with an angle of 45°, having only the shoulder and the head out of the water, as well as the arms, linked to facilitate the prehension by the rescuer.
The protection clothes keep the manikins clean and increase considerably their lifetime. They are made of a polyurethane/polyester coated with an orange color for "Manoverboard" and the arms extremities are in breathable links to let evacuate the water
Dry weight : 20 kg / Wet Weight : 40 kg / Height : 1.5 m
Option: weighted vest of 10 or 20 kg.

Caractéristiques

- Size : 1.5 m
- Dry weight : 20 kg
- Wet weight : 40 kg
- Options : Gilet lesté de 10 ou 20 kg
