

COVER EDGES ROPE PROTECTION

<https://www.securhit.com/en/ropes-and-cords/258-protection-de-corde-cover-edges.html>

Cover Edges rope protection

Description

The Edge Roller is used to guide a moving rope and protect it from a friction zone.

Vertical and horizontal rollers to guide the moving rope with minimum friction.

The vertical rollers prevent the rope from coming out of the protection.

Each module can be positioned independently of the others and ensures perfect adaptation to the terrain.

The modules are connected to each other by quick links, allowing for endless additions to the modules depending on the terrain configuration.

The Roller Edge is a practical, economical and reliable protection tunnel for passing ropes.

Caractéristiques

- Dimensions : 57.5 x 57.5 x 325 mm
- Materials : Aluminium, laiton et acier
- Minimum operating temperature : -30°C
- Maximum operating temperature : 50°C
