

GLASMASTER WINDSCREEN SAW

<https://www.securhit.com/en/outillage-de-forcement/336-scie-pour-pare-brise-glasmaster.html> Glasmaster
windscreen saw

Description

The Glas-Master saw is the most efficient and reliable tool for cutting windscreens, windows and rear windows, whether glued, laminated or coated with a special film. Its interchangeable toothed blade cuts by pulling and expels the debris towards the outside, avoiding the risk of injury to those being rescued. Its efficiency means it can cut through a car windscreen in less than a minute. The Glas-Master saw can also be used underwater and works in the same way. The saw is supplied with a pair of wall-mounting clips and an impact pin. The carbide tip on the rear handle, designed for drilling windscreens, is identified and painted red.
