Fire and rescue service training manikin

Description

The most versatile manikin for all rescue scenarios typically practised by emergency rescue professionals including: Confined Space, USAR, Chemical/Biological Hazard, Road Traffic Collision & general handling exercises - ensuring effective, realistic training.
Now constructed in the same flame retardant Polyester used in Police ballistic/stab vests, which typically has 4 times the strength and abrasion resistance of 16oz canvas or P.V.C, making the manikins even stronger than before.
Anatomically correct weight distribution gives the 'feel' of an unconscious casualty.
Strong webbing loop allows easy handling, hauling aloft, storage and suspension for drying.
Tough enough to withstand being buried under concrete or steel lintels, driven over by a 4x4 vehicle, or dropped from a second floor window without damage.
Water repellent material, making it suitable for wet or foul scenarios.
Soft body joints eliminate the risk of pinch welts and bruising; common injuries when using plastic bodied manikins.
Available in a range of sizes and weights, from the 5kg Baby to the 90kg adult.
We also offer a shorter adult manikin often preferred by some of our customers in Asia - these are offered at 1.7 metres and 30Kg, 50Kg and 70Kgs.
These manikins will withstand temperatures up to 100°C.
Comes complete with boots and overalls, which are easily replaced if damaged.

Caractéristiques

- Weight : De 5 kg à 90 kg
- Size : De Bébé (0,7m) à Adulte (1,8m)
