Fire and rescue service training manikin obese version

Description

All sectors as well as Fire & Rescue, Hospitals, and Ambulance can experience heavier casualties but can you safely manoeuvre a larger person?
Constructed in waterproof Polyester: conforms to BS EN ISO 6330), OEKO-TEX® Standard 100 and ISO 17050-1 - the new material is tough, safe to handle and easy to clean.
Anatomically correct weight distribution gives the 'feel' of an unconscious person, helping to improve pre-hospital clinical care.
Strong enough to be buried under concrete or steel lintels with no damage; placed in or under vehicles; - these manikins are tough enough for all training exercises!
They are designed for a team of at least 4-6 people to rescue and are supplied complete with a carrying sheet to assist in carrying and positioning the manikin. The carry sheet has a safe working load of up to 600kg (LOLER certified).
The 90 Kg Manikin is useful where a lighter weight is required without forfeiting the bulk of the bariatric manikin.
Made in the UK all manikins conform strictly to our ISO9001:2015 standards.

Caractéristiques

- Weight : de 90 kg à 260 kg
- Size : Adulte d'1,8m
