A highly resistant manikin for training at height

Description

An extremely tough manikin for Working at Height training in many industries: Wind Turbines, Telecommunications, Stage and Theatre, Scaffolding, Police & Military, Maritime, Factories & Industry, Fire & Rescue, Cleaning and Maintenance, Construction, Pole Top and Tower Rescues.
Tough Polypropylene plastic strips running from the shoulders to the knees prevents excessive flexing when used aloft.
Anatomically correct weight distribution gives the 'feel' of an unconscious person - perfect for pole top or tower rescues.
Realistic sizes and weights - will demonstrate the difficulties of dealing with an adult unconscious casualty
Strong enough to be dropped from 2 or 3 storeys with no damage - these manikins are tough!
The Polyester is water repellent, making it suitable for training in wet or dry conditions as it can be easily cleaned and dried.
Protective consumables including, coveralls and boots, greatly extend the life of the manikin.
The inner chest contains polypropylene plastic strips and closed cell foam, which creates a more rigid structure. This chest-like structure helps the manikin to maintain its shape when used in a harness and prevents 'slumping'.
This manikin does not include a rescue harness.

Caractéristiques

- Weight : 30, 50 et 70 kg
- Size : 1.8 m
