Flame simulation curtain

Description

The fire simulation curtain for flames is ideal for the simulation of flames outdoors or in large spaces. The curtain covers a large surface at once and the print is properly visible from both sides.
The curtain is fire resistant and indelible and as a result extremely suitable for outdoor use. Combine the curtain with blaze spots and a smoke machine for an even more realistic effect. This way you will quickly simulate a large seat of fire. The curtain is also sometimes used to block a passage in exercise situations where people walk through smoke.
The curtain is ringed with eyelets on the sides, as a result of which you can easily fix it with the supplied elastic bands. The fire simulation curtain is supplied in a case 40 x 30 x 8cm.
