Firespot

Description

The FireWare FireSpot will allow you to very easily create very realistic flame images. This spot has been especially designed for this purpose. 4 LED light sources can be found in this 10 Watt luminaire: 2 red and 2 orange. These LED□s are equipped with very special lenses, resulting in a broad-based red glow with an orange core. This is therefore also the ideal configuration for simulating horizontal and vertical flame effects !
It goes without saying the spot in the IP67 has been equipped and provided with quite a lengthy 2 meter cord. The housing is made of top quality anodised aluminium. This firespot is also perfectly suitable for flame simulation in wheel housings, above system ceilings and other compact areas, as a result of its compact 78x78x175mm dimensions.
