3-Outlet Fire Division with Wheel Valves - High-Strength Aluminum

Description

The 3-outlet fire division with wheel valves is designed for effective and secure fire protection. Each outlet features wheel-operated valves for progressive opening and closing, minimizing the risk of water hammer during use.

Constructed from first-cast A-S7G 06 Y33 aluminum alloy, thermally treated for optimal strength, this division has a red polyester coating for maximum visibility in emergency situations.

Practical and durable, it includes an integrated carrying handle and floor stabilizing brackets for safe and easy positioning. The lightweight and long-lasting aluminum construction ensures extended service life with minimal maintenance.

Key Features:

- 3 outlets with wheel valves
- Progressive opening to prevent water hammer
- Thermally treated A-S7G 06 Y33 aluminum alloy
- High-visibility red polyester coating
- Integrated carrying handle and floor stabilizers

Ideal for professional fire safety installations, this fire division offers reliability, durability, and ease of use.

Caractéristiques

- Material : Alliage d'aluminium
