Professional high-expansion firefighting foam generator

Description

The FOMAX 7 high-expansion foam generator is a professional firefighting device designed to produce large volumes of foam for fire suppression applications. Powered by a water-driven turbine, it generates high-expansion foam with an expansion ratio of up to 1,200. Particularly suitable for use in enclosed spaces, confined areas and industrial premises, the FOMAX 7 enables rapid filling of large volumes with foam, helping to suppress fires and limit their spread.
Its robust design features a high-density polyethylene (HDPE) body with integrated carrying handles, a maintenance-free bronze turbine, a built-in by-pass system and a corrosion-resistant hydraulic circuit. The by-pass system helps maintain performance even when operating against high back pressures.

With a maximum foam output of 204 m³/min and a discharge capability of up to 15 metres in height, the FOMAX 7 is an effective solution for warehouses, ship holds, engine rooms, technical rooms, cable ducts and industrial facilities.
Compact, portable and easy to operate, this high-expansion foam generator is designed to meet the requirements of professional fire protection teams and firefighting services.
The FOMAX 7 is supplied with a 30-metre polyethylene foam delivery duct, allowing foam to be directed towards the fire area, together with an operating manual in French.

Technical Specifications
- Model: FOMAX 7
- Type: High-expansion foam generator
- Operation: Water-driven turbine
- Body material: High-density polyethylene (HDPE)
- Turbine: Maintenance-free bronze turbine

- Hydraulic circuit: Corrosion-resistant
- By-pass system: Built-in
- Inlet / outlet connections: 2-inch male threaded connections
- Maximum foam output: 204 m³/min
- Foam expansion ratio: 800 to 1,200
- Water supply pressure: 7 bar
- Foam discharge height: Up to 15 metres
- Dimensions (L × W × H): 47 × 87 × 88 cm
- Weight: 49 kg

Caractéristiques

- Dimensions : 47 x 87 x 88 cm
- Weight : 49 Kg
- Warranty : 2 ans
