Fire-fighter glove

Description

The top and palm hand of RESCUE II consist of high quality, fire-resistant and very soft cow Nappa-leather. The width-adjustable cuff made of split leather guarantees optimal wearing comfort. Due to the elastic constriction at the wrist, the glove always fits, even when a crushing grip becomes necessary.

There is also a metal hook and ring to attach the gloves on each other or the fireman gear. Additional protection is provided by the knuckle padding on the tophand.

A breathable and waterproof membrane additionally protects against the penetration of moisture and the chemicals required by EN 659.

Reflective strips ensure best visibility.

Washable at 60 °C.

Complies with EN 659 standard.
