Lightweight helmet with ventilation holes. Ideal for protecting professionals when working at height or on the ground.

Description

When working at height or on the ground, you need maximum protection, especially for your head. The STRATO VENT helmet designed by PETZL combines lightness and efficiency to protect professionals from the risks of impact.

Well thought-out construction:

- A solid, lightweight inner shell thanks to EPP (expanded polypropylene) and EPS (expanded polystyrene) materials.
- CENTERFIT adjustment system to perfectly center the helmet on the head (2 side adjustment knobs)
- FLIP&FIT, a device that places the headband in a lower position (more reliable fit)
- Interchangeable absorbent comfort foams supplied with the helmet

Safety in all working environments

- DUAL chinstrap to adapt resistance to different work environments, at height (EN 12492) or on the ground (EN 397)
- A clip with two modes: "high resistance" or "low resistance".
- A rigid outer shell that deforms on impact for better shock absorption
- Ventilation holes with sliding flaps for efficient ventilation of the helmet

Adding accessories

For even greater safety, helmets can be fitted with practical equipment such as protective visors, hearing protection, PETZL headlamps, dirt guards, neck guards and badge holders.

Caractéristiques

- Weight : 415 g
- Materials : ABS (acrylonitrile butadiène styrène), EPP (polypropylène expansé), EPS (polystyrène expansé), polyamide, polycarbonate, polyester haute ténacité, polyéthylène
- Tour de tête : 53-63 cm
