Rigid splint with flexible internal structure

Description

The Blue Splints Kit is a must-have immobilization set designed to help rescue workers to stabilize suspected fractures of limbs on patients, reducing pain and risks of additional damage during pre-hospital transport operations.

It comes with 5 highly-resistant rigid splints and a carry bag. Each splint can be used for both paediatric and adult patients of any size ; self-adherent straps ensure a safe and fast immobilization of the limbs, whereas an additional orange strap identifies the attach area of each splint, making the strapping process faster.

The structure and design of blue splints allow paramedics to provide emergency infusion. The kit is very easy to wash and resistant to bacteria contamination.

Bag dimensions : 620 x 310 mm

Kit weight : 1.45 kg

Caractéristiques

- Attelle pour jambe : 580 x 450 mm / 360 g
- Attelle pour bras : 590 x 280 mm / 300 g
