Self-braking PETZL I'D L descender with anti-panic function for rescue operations. AUTO-LOCK system for immobilization without manipulating the handle or making a stop key.

Description

Personal protective equipment ensures the safety of professionals working on hazardous sites. PETZL's I'D L descender is particularly well-suited to rescue operations, thanks to its many advantages.

Easy-to-use equipment:

- A locking pawl on the mobile flange for quick rope insertion without losing the descender.
- A guide and markings to facilitate rope installation
- An error-indicating trigger to prevent any risk of accident in the event of incorrect rope installation
- Ergonomic handle for better control of descent
- Descent on the flange or in the V-shaped braking groove
- AUTO-LOCK system for immobilization without having to manipulate the handle or make a stop key
- Direct storage of the handle once the rope has been removed from the descender

Foolproof versatility:

- Rope cleaning when the rope is blocked, without having to manipulate the handle
 - Pivoting cam for easy rope slack take-up and reversibility of the hauling system
 - A screw for locking the movable flange (integration of the descender in a rescue kit)
 - Compatible with rope diameters from 12.5 to 13 mm
 - Possibility of fitting an additional brake for better control of descent
 - Reinforced protection on the rope's friction zone to ensure greater durability.
- Particularly suited to rescue operations.

For descending heavy loads up to 280 kg.

Available in red or black.

Weight: 600 g

Caractéristiques

- Materials : Aluminium, acier, polyamide
- Charge maximale pour une personne : Jusqu'à 150 kg
- Charge maximale pour deux personnes (secours) : Jusqu'à 280 kg
