PETZL REEVE travel pulley for easy installation of rescue systems on zip lines. A compact piece of equipment that offers excellent travel performance.

Description

Are you looking for an integrated solution specially designed to facilitate zip-line rescue? That's the aim of PETZL's REEVE pulley, a compact piece of equipment with limited height and number of connectors.

The triple-action opening of the mobile flange makes the pulley easy to handle, even when wearing gloves. It is possible to install a rope while maintaining the connection between the equipment and the anchor. A red light warns you if the flange lock is missing.

Two large-diameter sheaves on sealed ball bearings guarantee high performance when moving. You can fine-tune the system before placing it on the main rope.

PETZL's REEVE pulley meets a wide range of needs, depending on the situation:

- Possible doubling of the system by joining two REEVE pulleys, if the ropes are close enough (if not, by connecting the pulley to the top hole).
- A pulley that can be used in a hauling system
- Compatible holes for passing ropes or webbing to create a direct connection
- 19 mm holes allow most carabiners to be turned around
- A balanced system with an odd number of connection holes

The pulley can be used by up to three people at the same time.

Rope diameter between 7 and 13 mm.
Sheave diameter: 38 mm.
Maximum working load: 4 x 2 kN = 8 kN.

Breaking load: 36 kN.
Efficiency: 95%.

Caractéristiques

- Weight : 650 g
- Materials : Aluminium, acier inoxydable, polyamide
- Certifications : CE EN 12278, NFPA 2500 General Use, UKCA, XF 494: FZL-H-T 9.5/13
