

PETZL KOOTENAY PULLEY

<https://www.securhit.com/en/pulleys-and-ascenders/625-poulie-petzl-kootenay.html>

PETZL KOOTENAY knot-passing pulley, designed to pass through knots. Ideal for hoisting loads to great heights or moving them on a zip line with two ropes.

Description

Pulleys are essential for working at height. PETZL's KOOTENAY pulley makes it easy to pass knots. This is made easier by the large volume available between the flange head and the sheave. In this way, it's easier to hoist loads to great heights, or to move them in a zip-line with two ropes.

High performance is made possible by the large-diameter sheave (76 mm) mounted on sealed ball bearings. Its locking pins enable the pulley to be used as a mooring. For ropes, the rope pulley accepts diameters from 8 to 19 mm.

Maximum working load: $5 \text{ kN} \times 2 = 10 \text{ kN}$.

Caractéristiques

- Weight : 1390 g
- Certifications : CE EN 12278, UKCA, XF 404: FZL-H-Q 9.5/16
