PETZL METEOR helmet, specially designed for climbing, mountaineering and ski touring. Lightweight, compact and comfortable safety equipment.

Description

Some sports require specific equipment to ensure safety in all situations. PETZL's METEOR helmet is designed for climbing, mountaineering and ski touring - and is CE-certified as a ski touring helmet.

- Comfortable to wear thanks to its light weight (225 g to 240 g depending on size) and In-Mold technology (an impact-resistant polycarbonate outer shell permanently bonded with EPS foam).
- Reinforcement around ventilation openings and grooves
- A covering shape to limit impact on the sides, front and rear
- Designed according to Petzl's TOP AND SIDE PROTECTION label
- Designed to fit over a ski mask
- Easy adjustment, with or without gloves
- Front hooks and back elastic band for headlamp attachment

Please note: the PETZL METEOR helmet does not meet the requirements of the EN 1077 helmet standard for alpine skiers.
