Ultra-light FLY PETZL harness for technical mountaineering and ski-mountaineering. Practical, easy-to-modulate equipment for adjusting comfort and lightness. Available in two sizes, M or L.

Description

When it comes to technical mountaineering and ski-mountaineering, you need the right, ultra-reliable equipment. PETZL's FLY harness offers great freedom of movement, while ensuring the safety of the wearer.

- A harness that can be put on with the feet on the ground
- Ultra-light weight (100 g for size M, 110 g for size L)
- Minimalist design for maximum space savings
- Buckle-free harness (PETZL patent), with sliding pin instead, for easy belt adjustment
- Adjustable thigh straps for greater comfort, via a lark's head.
- Fine thermoformed foam and split inner straps (FUSEFRAME technology)
- Excellent load distribution thanks to comfort foams
- Easy transport and storage thanks to two gear loops and four buckles
- Siliconized inner thigh loops for holding ice screws
- High abrasion resistance thanks to reinforced HDPE at attachment points, straps and gear loops

The FLY harness is protected by a pouch for easy storage and transport. A minimalist cover allows it to be stored when in use without the foams.

Caractéristiques

- Materials : polyamide, polyester, polyéthylène haute densité
- Certifications : CE EN 12277 type C, UKCA, UIAA
