PETZL MICROFLIP 2.5 M adjustable reinforced lanyard for work positioning in pruning operations. Designed for easy movement on trunks. High visibility.

Description

Pruning work requires equipment that's right for both professionals and trees. The aim is to ensure the safety of workers while maintaining the good health of the plants. PETZL's adjustable, high-visibility MICROFLIP 2.5 M lanyard combines both, thanks to its many advantages.

- Double use on the harness's lateral attachment points
- Rope core to prevent potential cutting
- The MICROGRAB cam lock makes length adjustment a snap.
- Flexibility for easy transportation of the lanyard
- Easy movement over trunks thanks to the sturdiness of the equipment
- Yellow color for visibility during work
- Plastic sheathing on the ends to limit abrasion and keep carabiners in position
- Durability thanks to the reinforced lanyard sheath glued to the rope
- Can be used with the MICRO SWIVEL to prevent twisting of the lanyard

The MICROFLIP 2.5 M lanyard from PETZL is available in three lengths: 2.5 m (750 g), 4 m (1055 g) and 5.5 m (1355 g).
