DELTA quick link from PETLZ, triangular in shape. This ultra-reliable connector is made of steel for maximum strength when working at height.

Description

In the fields of load lifting, human lifting and fall prevention equipment for working at height, quick links are widely acclaimed. They are appreciated for their performance and reliability, guaranteeing safe operations.

PETZL's DELTA quick link is specifically designed, thanks to its triangular shape, for connecting wide devices or connecting three elements at slightly different angles.

Steel is a material appreciated for its impact resistance and high strength. Important assets for devices used in work at height.

The DELTA quick link is available in three versions: 10 mm, 8 mm and 8 mm wire diameters (with a bar to hold the CROLL to the harness). A black version is also available.

Weight: between 85 and 150 grams depending on model.
Long axis resistance: 45 kN for the 10 mm model, 27 kN for the 8 mm versions.
Opening: 12 mm for 10 mm diameter links and 10 mm for 8 mm diameter links.

Caractéristiques

- Material : Acier
- Certifications : CE EN 362 type Q, EN 12275
