PETZL LASER SPEED ice screw with integrated crank handle. A high-performance accessory with simplified priming thanks to the three-pronged bit. For all types of ice.

Description

The ice screw is one of the accessories required to guarantee greater safety during mountaineering sessions or glacier activities. It's easy to take with you because it's lightweight and simple to use. The ice is perfectly perforated for use as a progression point, belay point or relay point. PETZL's LASER SPEED ice screw is specially designed to help you on your ice outings.

- A sturdy steel tube for easy priming and screwing, whatever the type of ice.
- Long-lasting, thanks to lightened tube and optimized threading
- A three-pronged steel bit for easy ice priming
- Easy sharpening, thanks to a patented bit sharpening reserve
- Compact foot for better screwing into carved ice
- Handle incorporated into the spindle for better grip, with a lever arm designed for faster screwing.

PETZL's LASER SPEED ice screw is available in three lengths: 13 cm (128 g), 17 cm (143 g) and 21 cm (161 g). The different sizes are color-coded.
