PETZL RAD'LINE ROPE

https://www.securhit.com/en/ropes-and-cords/735-1169-cordelette-petzl-rad-line.html#/1085-longueur_r011aa-30_m

Ultra-light, compact, hyperstatic PETZL RAD'LINE rope. Designed for crevasse rescue, abseiling and roping out of crevasse zones on glaciers.

Description

In some situations, particularly in rescue operations, small items of equipment make a big difference. Like PETZL's RAD'LINE hyperstatic cord, 6 mm in diameter. Extremely light, compact and with a rough sheath, it is used for crevasse rescue, abseiling and roping up on glaciers to get out of crevasse zones.

Practical design

- Lightweight (22 grams per meter)
- Minimum space requirement in the pack

Rough sheath

- Very good grip (better control of descent when abseiling and braking aid in the event of a crevasse fall).
- Compatible with the TIBLOC rope clamp and MICRO TRAXION and NANO TRAXION pulley clamps
- HDPE reinforcement, a durable, abrasion-resistant material

Hyperstatic structure

- No yo-yo effect during rappels or crevasse falls, and greater efficiency thanks to static elongation of less than 2%.
- Can be roped to skis to get out of crevasses

Caractéristiques

- Materials : polyéthylène haute densité (PEHD), polyester, polyamide
- Poids au mètre : 22 g
- Certifications : CE EN 564, UKCA
