

BASKET STRETCHER SHELL

<https://www.securhit.com/en/stretchers-and-rescue-carriers/768-barquette-de-sauvetage-shell.html>

Robust and versatile basket stretcher

Description

The Shell is a robust and versatile basket stretcher that goes beyond conventional patient transport equipment. It features a distinctive high-density polyethylene shell that acts as a protective cocoon for the patient, guarding against side impacts and providing an added layer of safety during rescue operations. Equipped with strategically placed handholes and eyelets, the stretcher can be lifted or carried by multiple operators, making it suitable for a variety of rescue scenarios. Two skids at the bottom of the shell minimize friction during dragging operations, allowing for smoother navigation across different terrains. With 12 handles and 4 eyelets, the Shell stretcher is suitable for both ground transport and aerial lifting, showcasing its versatility in diverse rescue situations. It comes with a set of restraint belt and floating footrest.

Colour: Orange

Complies with CE standard

Caractéristiques
