RICH Forest Fire Rake with Wooden Handle - Professional Firefighting Tool

Description

The RICH forest fire rake is a specialized tool for firefighters, forestry services, and vegetation fire control teams.

Designed for effective intervention on forest fires, brush fires, and wildland fires, it allows you to rake, dissect, and remove combustible vegetation to stop flames from spreading. Its robust steel frame with red lacquer finish ensures excellent durability under demanding conditions.

The dissecting, grooved, and sharpened tines penetrate soil and vegetation efficiently to create firebreaks, turn over embers, and eliminate combustible materials. The RICH rake features interchangeable tines, making maintenance easy and extending the tool's lifespan.

The 1.2-meter wooden handle provides a comfortable grip and excellent maneuverability during prolonged operations in the field.

This tool is particularly valued for emergency brush clearing, fireline management, and securing burned areas.
