

KONG STELVIO GALLOWS

<https://www.securhit.com/en/treuils-tripodes-et-antichutes/94-potence-kong-stelvio.html> Lightweight alloy stem for use outdoors or in confined spaces

Description

Light alloy gallows for use in cliffs, shafts, excavations, confined spaces, etc. to recover injured people or loads in a simple and quick way and protect the ropes from friction that could damage them.

Composed of 2 aluminium tubes, equipped with a head with sheave and integrated bracing points and a spitable foot, mounted on a ball joint.

The weight and the limited dimensions as well as the fact of being dismountable in two pieces of 1,20 m make it a necessary operational system for any type of intervention. The mast is fixed to a plate by a special joint allowing an inclination up to 120°.

The special plate at the base of the mast allows it to be used in different situations (mud, ice, snow, grass, etc.).

Fixing brackets for direct mounting of the Ortless winch (winch not included)

Supplied with its transport bag.

CE EN 1496 class 3, in accordance with the Directive 89/392/EEC

Caractéristiques

- Weight : 9 kg
- Maximum extension : 2.3 m
- Dimensions retracted : 1.2 m
