

VORTEX MAST/BIPOD/TRIPOD

<https://www.securhit.com/en/treuil-tripodes-et-antichutes/96-mat-de-deport-bipode-tripode-vortex.html>

Offset mast usable as tripod, bipod and monopod

Description

Specially designed for professional use and can be used for mountain rescue or confined spaces. 2 separately usable heads create either a bipod for lift and offset, a tripod, or a combination of both. A spindle equipped with several holes and notches allows the height of the legs to be adjusted independently and they can be mounted inverted for use as a monopod with vertical support. The legs are divisible and 2 types of feet can be installed: "Raptor" feet with a carbon tip to reach small holes or cracks. The "Flat" feet are equipped with a rubber layer for an optimal grip on flat surfaces. Internal and external "Azorp" heads fit over the legs and attach to the additional head, their design with numerous holes allows the system to be guyed in several configurations. A set of carrying bags made from durable Cordura Nylon is provided, protecting the Vortex components. The Vortex comes complete with 2 heads, 3 legs, 3 Raptor legs, 3 Flat legs, 2 Azorp heads and all assembly parts and carrying bags. The multiple settings and configurations allow the Vortex to adapt to many emergency situations. CE certification

Caractéristiques

- Weight : 33 kg
- Minimum height : 2.7 m
- Maximum height : 3.7 m
- Breaking load : 36 Kn
