DRUID PRO CAMP self-braking descender

Description

CAMP's compact, lightweight DRUID PRO self-braking descender is designed for professionals working at heights and in first aid.

Designed for semi-static ropes between 10 and 11mm in diameter, it's ideal for working on inclined surfaces.

Its handle does not have an anti-panic locking function, so it is intended for expert users.

Its internal mechanism and locking cam ensure gentle action on the rope preventing premature wear, and allow light shocks to be absorbed by the rope sliding smoothly inside the device.

Technical features :

- Equipped with a release to allow the rope to slide under light or no load.
- Features a small ring for attaching an anti-loss rope.

Complies with :

- EN 12841/C as a work rope adjuster for persons up to 120 kg, can be used in rescue situations up to 200kg.
- EN 341/2A as a rescue descender on single rope, for persons up to 120kg and 11mm semi-static rope (Iridium 11mm).
- EN 15151-1 for use when climbing structures from the bottom using dynamic 9.9 to 11 mm ropes.

Caractéristiques

- Weight : 280g

- Materials : Alliage d'aluminium forgé et pièces mécaniques en acier inoxydable de microfusion
- Breaking load : 12kN
