Portable Emergency Safety Shower and Eyewash Station - Decontamination Device

### Description

The portable emergency safety shower and eyewash station is an essential first aid device designed for rapid decontamination of eyes and body following exposure to hazardous substances. It combines an emergency safety shower and eyewash system into a compact, autonomous, and easily transportable unit.

It is ideal for industrial environments, laboratories, construction sites, and any area exposed to chemical risks, where workers may come into contact with corrosive, irritant, or toxic substances.

Emergency eyewash and body rinse system

This portable safety unit is equipped with:

- a handheld shower spray with flexible hose for full-body rinsing
- a soft rubber eyewash bowl for safe and effective eye irrigation
- a dust cap to ensure hygienic protection before use

It enables rapid decontamination, helping to reduce the risk of injury following exposure to hazardous chemicals.

Autonomous and portable safety shower

Thanks to its integrated tank, this safety shower operates fully independently and does not require any fixed water connection. It can be deployed directly on-site, including remote or temporary work areas. Its portable design ensures fast activation in emergency situations.

Technical specifications

- Portable tank capacity: 18 liters (including 15 liters of potable water)
- Hose length: 1.5 m
- Water flow rate: 6 L/min

- Integrated pressure gauge
- Safety pressure relief valve
- Weight: 0.8 kg
- Height: 74 cm

Key benefits of the portable safety shower and eyewash

- Rapid eye and body decontamination
- Combined shower and eyewash system
- Fully autonomous, no fixed installation required
- Suitable for chemical and industrial risk environments
- Easy to transport and deploy
- Built-in pressure control system

This portable emergency safety shower and eyewash station is a vital safety solution for protecting workers exposed to hazardous substances.
